## Appendix P
## GitHub Repository and Docker Container Links

**Project Name: AGILA**

**GitHub Repository:**

https://github.com/EJhayGit/A-Mobile-Based-CNN-Face-Recognition-Attendance-System-with-GPS-Location-Validation

Provides the approved public source code, Dockerfile, setup instructions, and public thesis documentation.

**Docker Container:**

https://github.com/users/EJhayGit/packages/container/package/a-mobile-based-cnn-face-recognition-attendance-system-with-gps-location-validation

Provides the public GHCR image for the FastAPI backend and Fleet Manager website, with their production dependencies. Version 1.0.1 is available for Linux AMD64. The Flutter Android application is distributed separately.

**Docker Pull Command:**

```
docker pull \
  ghcr.io/ejhaygit/a-mobile-based-cnn-face-recognition-\
attendance-system-with-gps-location-validation:1.0.1
```

Bash command: the backslashes continue the command onto the next line. No GitHub login is needed to pull this public image.

Configure a separate PostgreSQL/Supabase database and supply DATABASE_URL and JWT_SECRET at runtime. The image includes no database, private credentials, participant records, or mobile/AI model artifacts. See the repository README for the complete installation procedure, port 8080, /login website, and /health check.

Public links and anonymous Docker pull verified on 14 October 2026.
